PROJECT PRESENTATION

STUDENT MANAGEMENT SYSTEM

GAJENDHIRAN.S

B.E. – Computer Engineering

PROJECT OVERVIEW • SOURCE CODE • LIVE OUTPUT • AWS IMPLEMENTATION

Project Overview

A simple introduction to the project

- The Student Management System is a web-based project for presenting student-related information in an organized way.
- The project demonstrates a web interface and a live deployed output.
- AWS services are used in the accompanying screenshots to show cloud resources and notification/logging setup.

Main Objectives

What the project aims to demonstrate

- Provide a simple and accessible student management interface.
- Show the source code and the working output through links.
- Demonstrate AWS configuration screenshots related to storage, serverless functions, notifications, monitoring, and networking.

Source Code

Open the project code using the link below

Source code is available online for review.

https://pastebin.com/raw/iw2ZNGSm

Live Project Output

Open the deployed website

The live website allows the project interface to be viewed in a browser.

https://alan-project-studentmanagment.netlify.app/

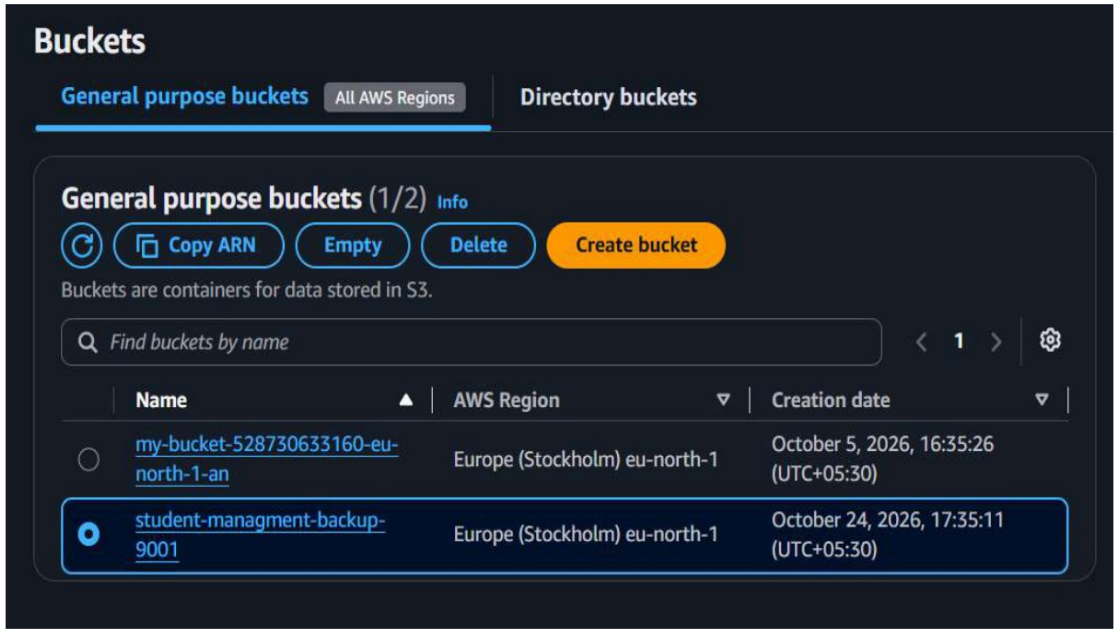

Click the hyperlink during the presentation to open the deployed output.

AWS IMPLEMENTATION

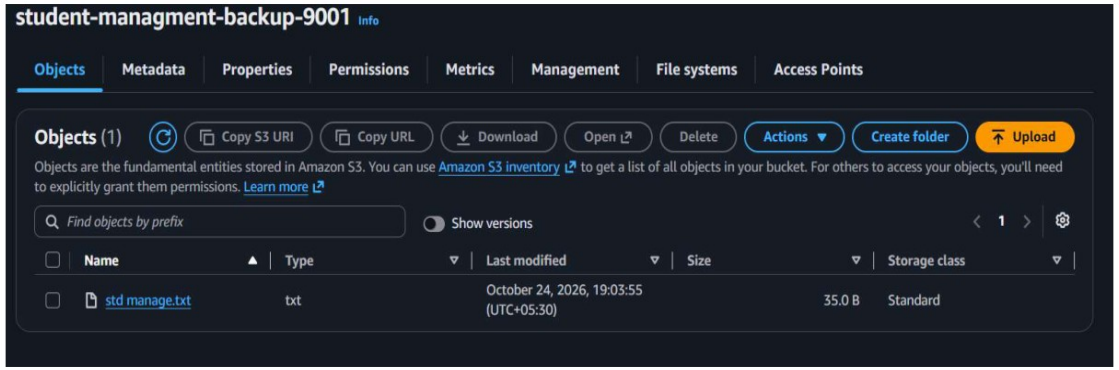

Screenshots arranged into a logical flow: storage, Lambda, permissions, notifications, logs, and networking.

AWS Storage – S3 Bucket

Create and inspect the project storage bucket

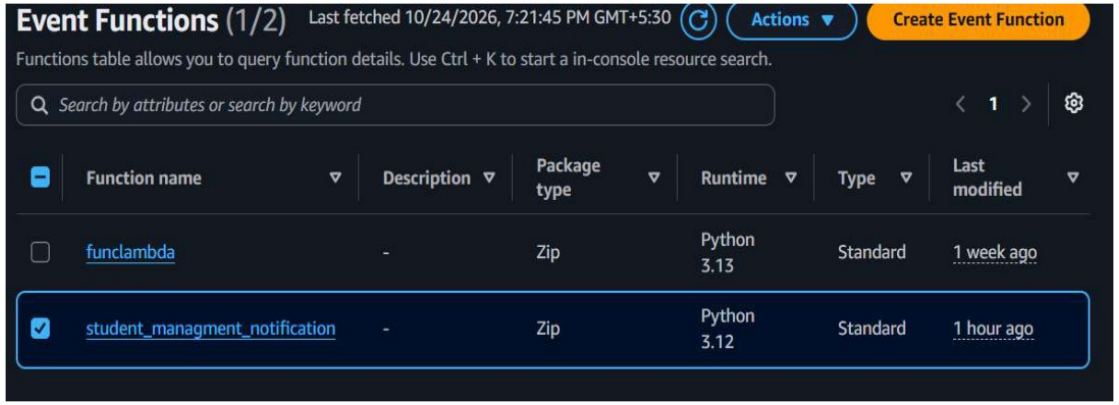

S3 bucket list

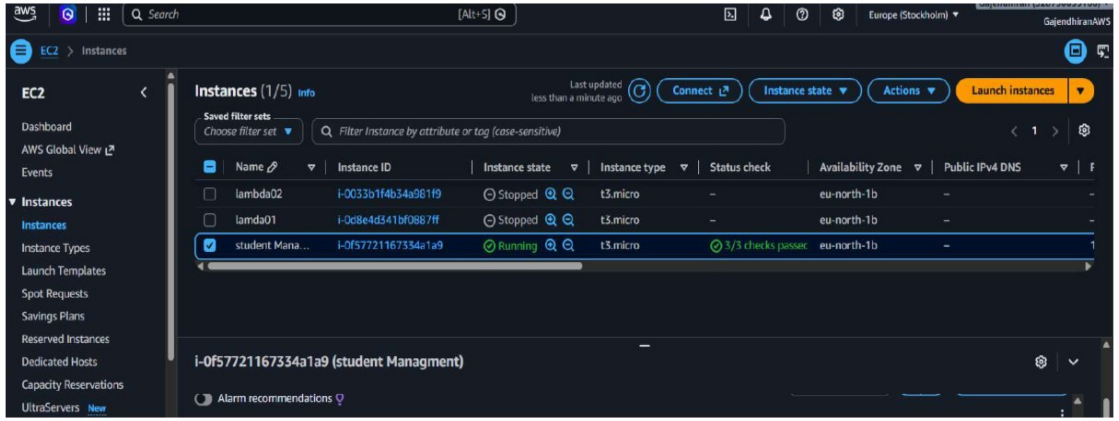

Bucket objects

AWS Lambda – Function Setup

Serverless function used in the project workflow

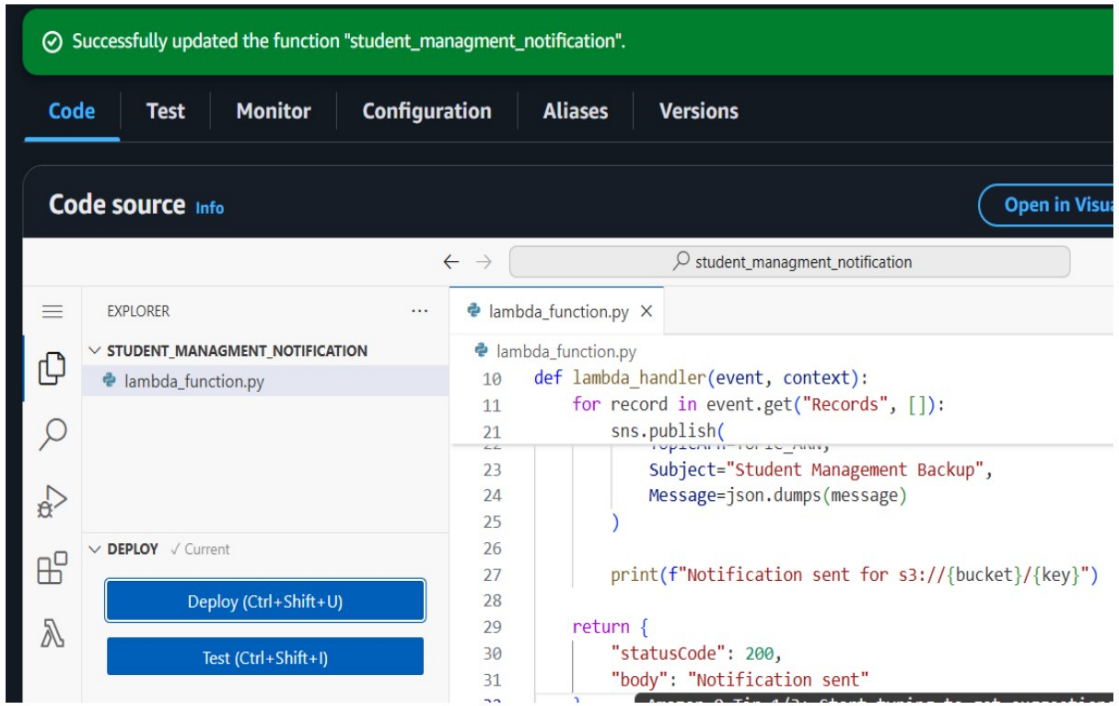

Lambda function list

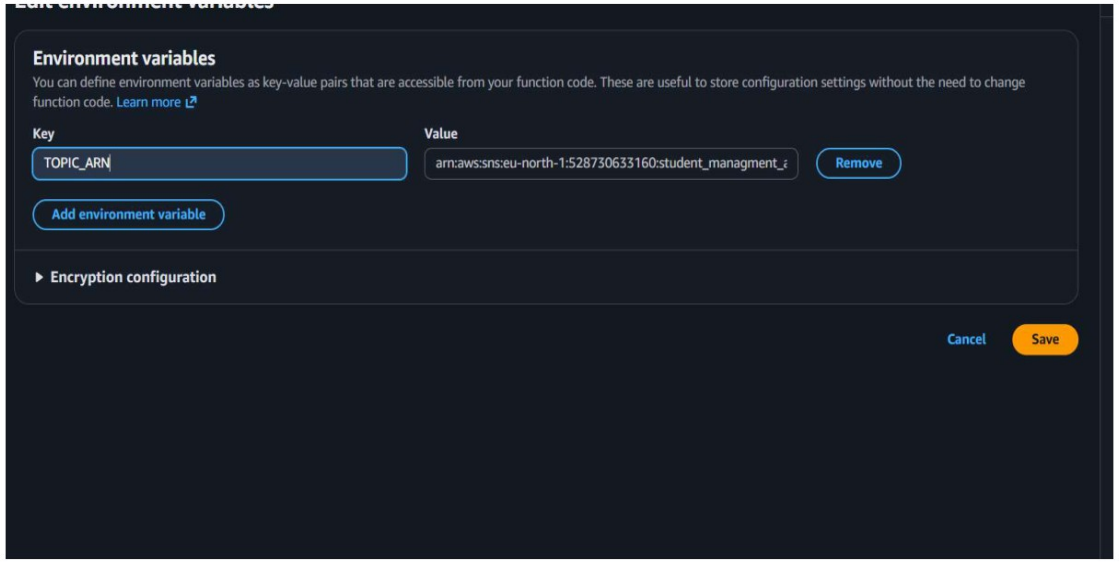

Function configuration

Lambda – Code and Configuration

Review the function code and environment settings

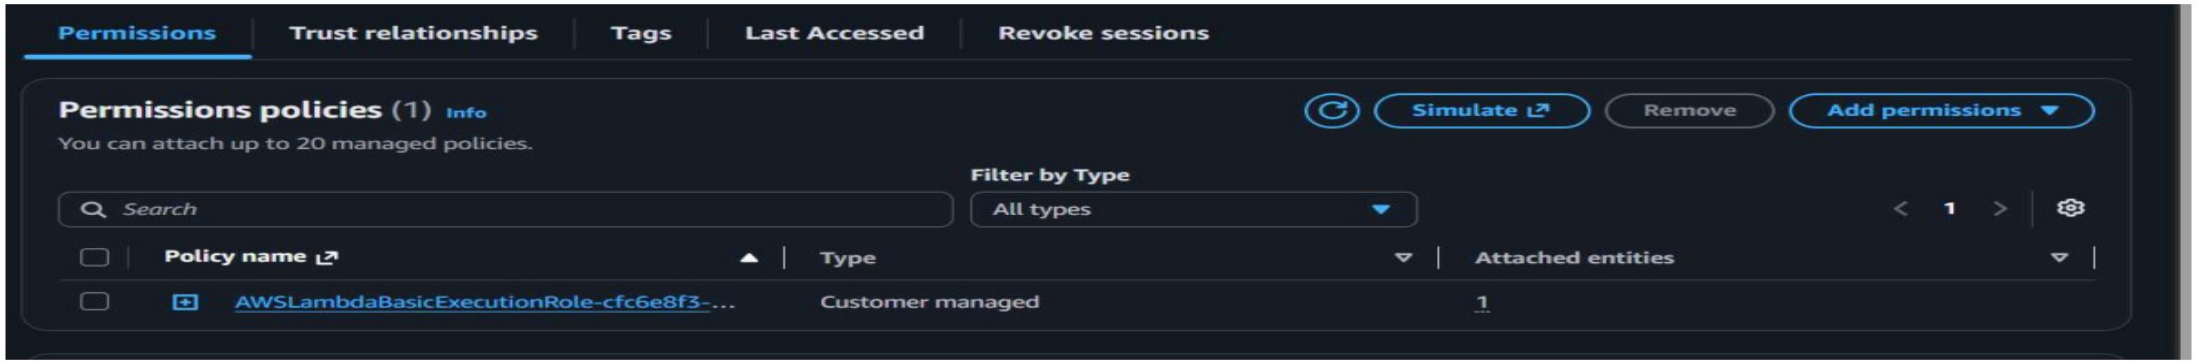

Lambda code view

Environment variables

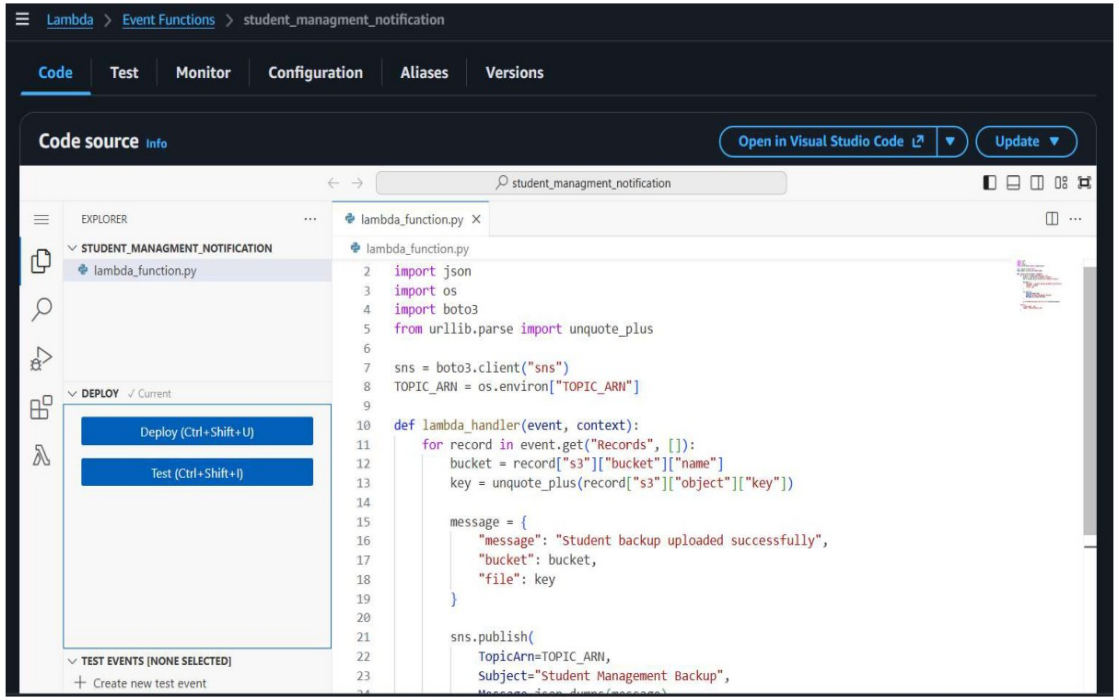

Lambda – Permissions

Review access permissions associated with the function

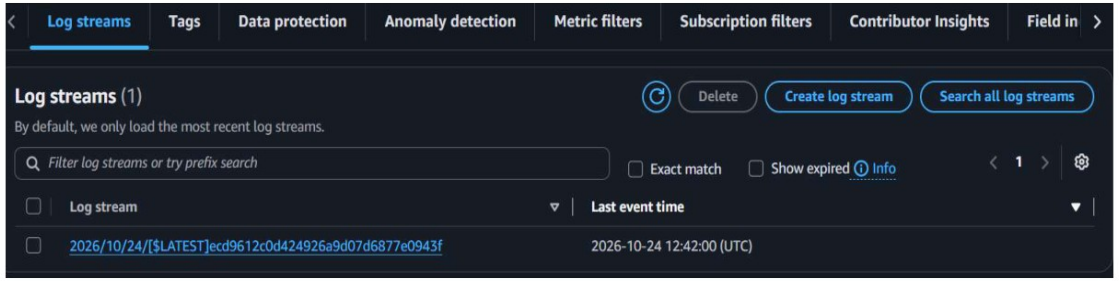

Lambda – Test and Execution

Function code and execution-related configuration

Function code

Test / monitoring view

AWS Notifications – SNS Topic

Create the notification topic for student management alerts

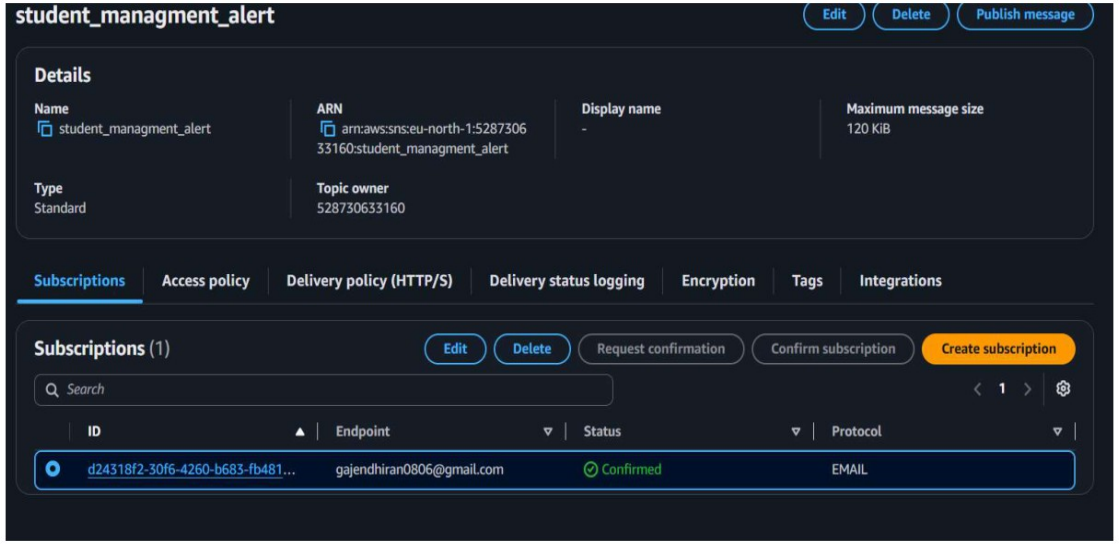

SNS topic list

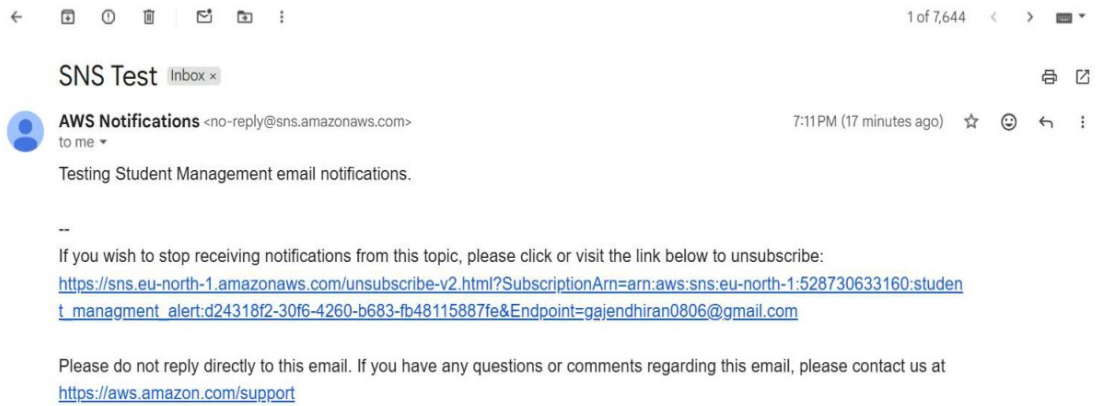

Topic details

SNS Subscription and Email

Subscription details and example notification email

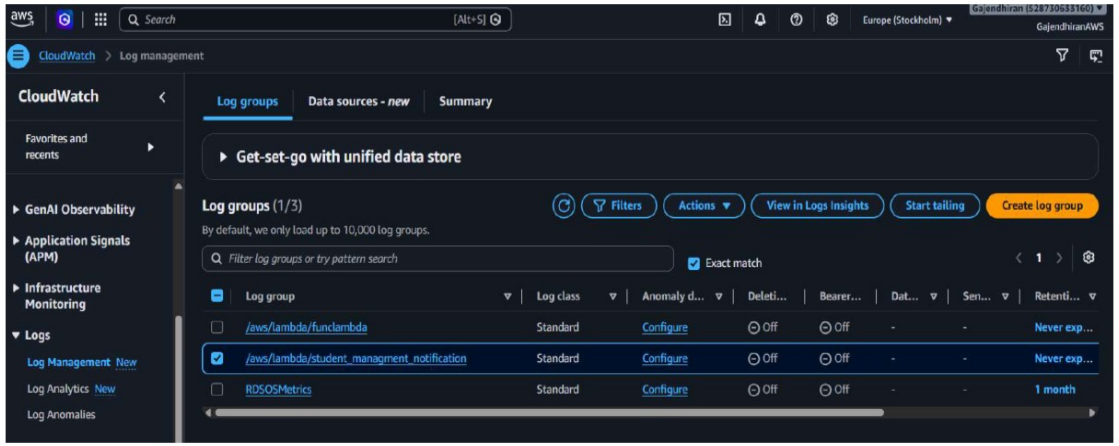

Topic subscription

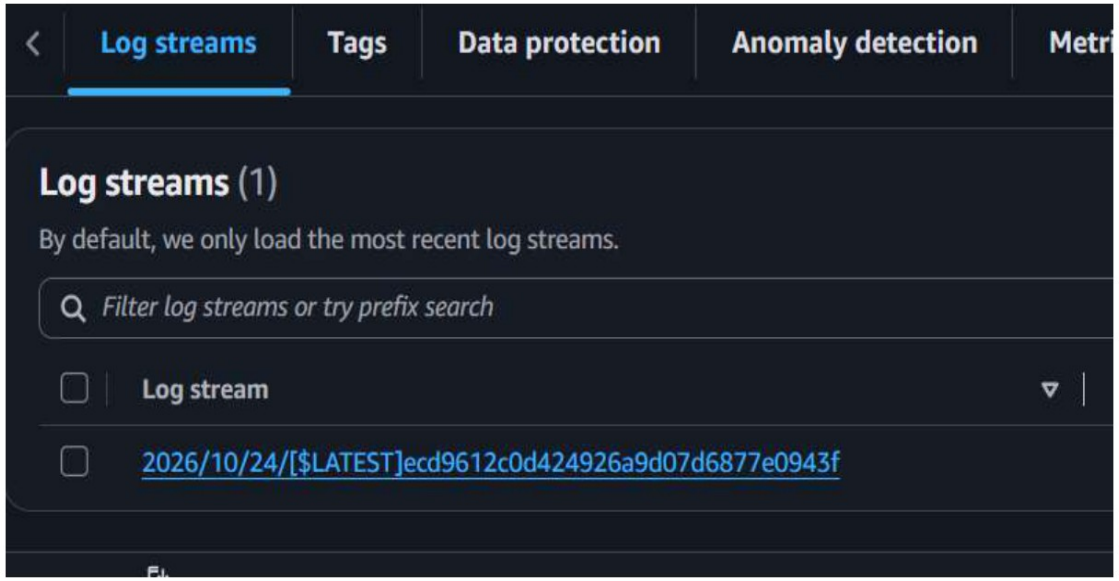

Notification email

AWS Monitoring – CloudWatch

Inspect logs and event-related resources

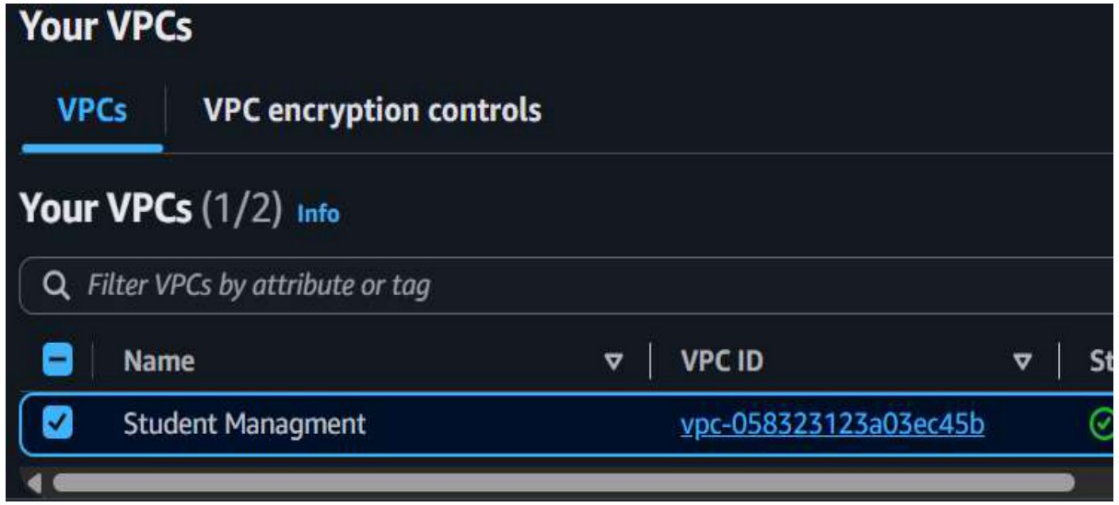

CloudWatch log groups

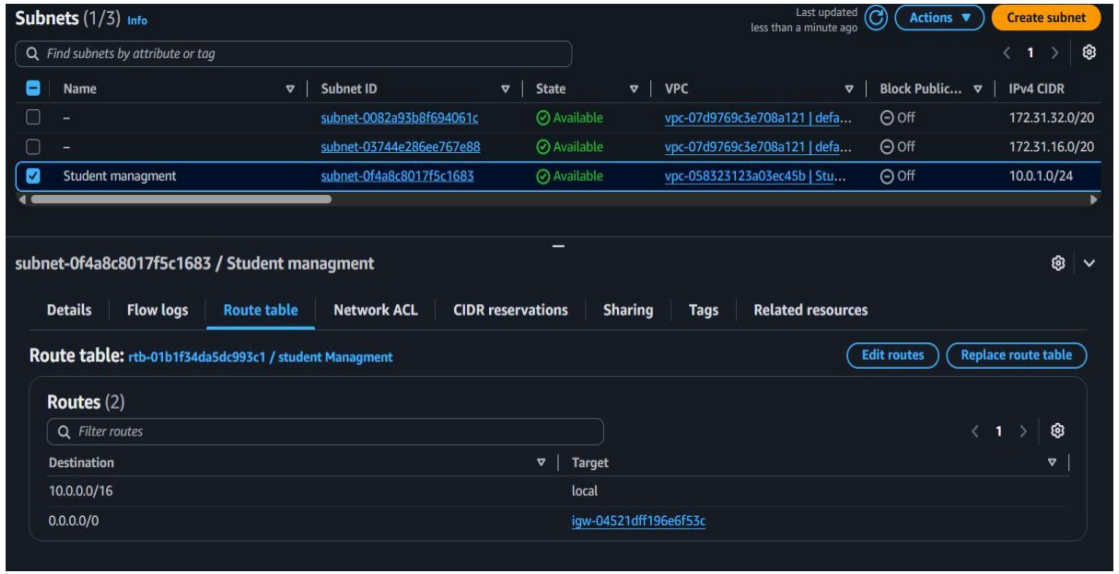

Log stream

AWS Networking – VPC and Subnet

Virtual private cloud and subnet configuration

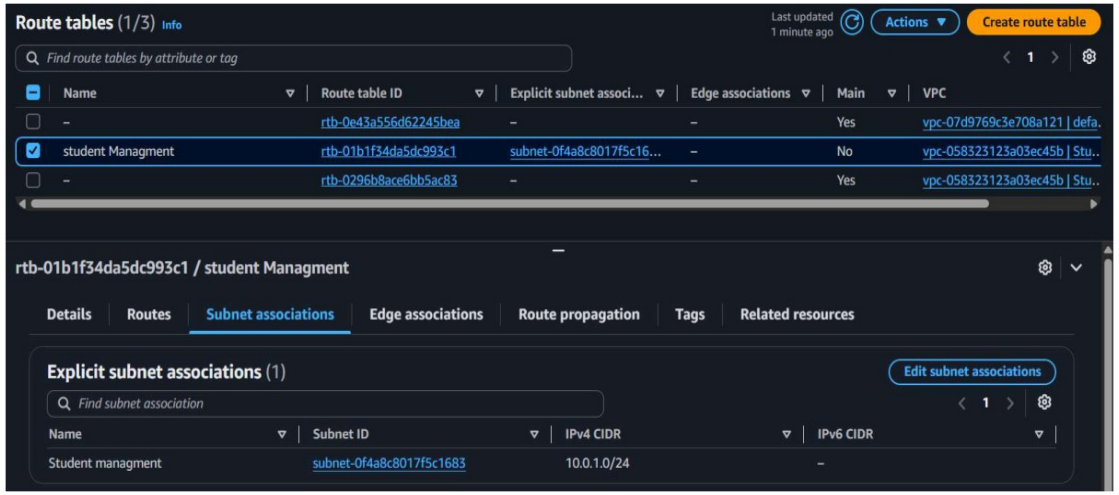

VPC details

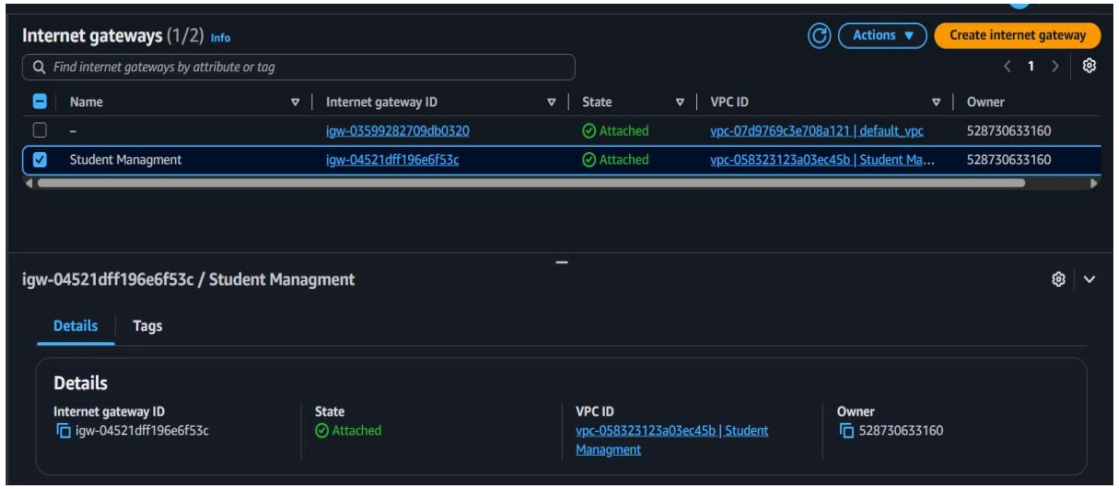

Subnet and route table

AWS Networking – Routes and Gateway

Route table association and internet gateway setup

Route table association

Internet gateway

Project Flow Summary

How the parts fit together

- The web project is presented through its source-code link and deployed output link.
- AWS screenshots show storage resources, Lambda configuration, SNS notifications, CloudWatch logs, and network setup.
- Together, these slides provide a simple walkthrough of the project and its supporting cloud configuration.

Thank You

Questions and discussion

- Thank you for your time.
